

Our goal: to provide anglers with products that improve their equipment, experience and comfort.

"As anglers, we know anglers' goals; as engineers, the limits to engineering and, as designers, the canons of aesthetics". thinkfish®

"Today, anglers with semi-automatic reels miss the precision and distance achieved with reels that avoid line memory. They also value fast slack line retrieval and feel vulnerable if the drag system has to work when the fish is reeling off. However, if they change over to manual technology they realise something is missing" thinkfish®

“Thinkfish® has been created from the passion and experience of years of fly fishing and from the collaboration of designers and engineers.”

THINKFISH® GUARANTEE

Thinkfish® has also gone further in terms of guarantees: "Unlimited warranty".

First two years:

Reel replaced due to any problem that may arise.

Indefinitely:

Free* repair of any problem inherent in the product.

*only associated transport costs

thinkfish®

THE FIRST THINKFISH® REVOLUTION:

After three years of development and tests, Thinkfish® presents its first product.

BOLD

“The evolution in the semi-automatic reel that flyfishing anglers have been waiting for has now arrived on the market”

REEL

“Large Arbor”:

5.9 cm internal diameter and 8.9 cm exterior diameter to avoid line memory. Capacity up to an AFTMA 7 weight line.

Hyper-ventilation:

An open design provides greater contact with the air to ensure synthetic and silk lines dry quickly.

Feed-out system:

Easy, fast and reliable for attaching to the frame.

LINE GUIDE

Made of polished carbon steel:

Minimum friction and less wear on the line when feeding out and retrieving.

Opening in the reel contact area:

Fast and easy line placement.

Elliptical shape:

Optimising the distribution of the line during retrieval.

RETRIEVAL SYSTEM

New mechanical technology:

World patented mechanical system with a three ring-gear planetary drive around the central axis to multiply lever transmission speed.

Protective covers:

Stop impurities from getting in during fishing, ensuring the equipment works perfectly under any conditions.

Materials:

Anodised aerospace aluminium and stainless steel: reliable, hardwearing and light.

MIXED CONE-MULTIDISC DRAG SYSTEM

Inertia and multidisc brake:

The brake is deactivated while the line is being retrieved but activated while it is being fed out. Fine adjustment of tension ensures greater control. Possible to use intuitively when battling with a fish.

6-bearing system in the mechanism:

Improves smoothness, providing “jerk-free” action and avoiding snapping the line when the fish snatches.

ROD HOLDER

Saw-tooth, adjustable design:

Avoids bad reel adjustment or unwanted movement and allows you to regulate the distance of the lever to the rod according to the optimum fishing posture. Safety screw ensures that it cannot come off the thread or get lost when adjusted.

Movement:

Turns on its own axis to better regulate the lever-rod distance.

RETRIEVER LEVER

Ergonomic lever design:

Positioned in line with the rod. Right and left balance from the natural position in the reel-rod unit with regard to the longitudinal dimension.

NEOPRENE COVER

Bold comes with a neoprene cover designed exclusively for Thinkfish®.
